

**\*\*\*First I would like to note that my program compiles and creates this weird first image that turned out pretty cool. I am going to continue working on it to print the test image.\*\*\***

**Q1. What are libraries good for?**

A1. It is an easier way for others to be able to use your code or vice versa

**Q2. What are the two types of library and how are they different?**

A2. Static & Shared Object. They are different due to the static library being linked to your executable while, the shared object is not. The shared object is also shared by multiple executables after being compiled.
